PROFESSIONAL SUMMARY

Computer Science student and product-focused developer building complete Flutter apps and React/Supabase web platforms. Strong in Dart/Flutter, React, Supabase Auth/Postgres, Row Level Security, REST APIs, scheduled data pipelines, local persistence, and deployment-ready architecture. Known for turning real problems into polished, end-to-end applications with clean UI, reliable data flow, and practical automation.

TECHNICAL SKILLS

Languages & Frameworks: Dart, Flutter, JavaScript, TypeScript, React, Next.js, Python, Java, C++

Mobile & State: Android Studio, Provider, Riverpod, Hive, Isar

Backend & Storage: Supabase Auth/Postgres/RLS/Edge Functions/Cron/Storage, REST APIs, Local Storage, Offline-first Architecture

Web & Tools: Vite, Tailwind CSS, HTML5 Canvas, Git/GitHub, GitHub Actions, PWA

SELECTED PROJECTS

The 2026 Notebook - Live FIFA World Cup Prediction Platform | React, Vite, Supabase, PostgreSQL

Built and deployed a FIFA World Cup 2026 PWA with official result tracking, what-if simulations, group standings, knockout brackets, prediction scoring, leaderboard, and community prediction reveals.

Implemented a Supabase Cron + Edge Function pipeline that polls FIFA every minute, validates all 104 fixtures, caches official results in Postgres, audits corrections, and triggers secure server-side scoring with RLS-protected access.

Hisaab - Offline Group Expense Splitter | Flutter, Dart, Hive, Provider

Built an offline-first trip expense app with trip/member CRUD, selected-person splits, balances, and simplified settlement payments.

Implemented local Hive persistence, generated model adapters, Material 3 theming, dark mode, and swipe-based edit/delete workflows.

Moto Tracker - Motorcycle Maintenance Companion | Flutter, Dart, Isar, Riverpod

Developed a Honda CG125 tracker for odometer readings, fuel logs, mileage, running costs, maintenance history, and service reminders.

Added Isar local database persistence, Riverpod dashboard updates, fuel/cost calculations, image attachments, charts, and notification foundations.

Personal Utility App - Authenticated Productivity Toolkit | Flutter, Supabase, Provider

Built a multi-module app with Supabase authentication, password-reset deep links, user/admin routing, and admin role checks.

Implemented QR business card CRUD, QR generation/scanning, scan history, unit conversion, audio recording upload/playback, and admin analytics.

CineMood - Mood-Based Movie Recommendation App | Next.js, React, TypeScript, Tailwind CSS, TMDB API

Created a responsive movie discovery app using mood filters, runtime/year/intensity preferences, TMDB search/details, trailers, ratings, and watch providers.

Added local watchlist, disliked/watched states, history, settings, region preferences, theme switching, and shareable recommendation flows.

ADDITIONAL PROJECTS

Recipe Explorer: Flutter REST API recipe app with cached images and detail views.

Trade Dashboard: React/Recharts analytics dashboard for synthetic XAUUSD backtest metrics.

Neural Dungeon: Single-file JavaScript dungeon crawler with procedural BSP generation, A* pathfinding, fog-of-war minimap, pickups, particles, and enemy AI.

EDUCATION

Bachelor of Science in Computer Science / Information Technology

COMSATS University Islamabad, Wah Campus • Wah Cantt, Pakistan

Current Status: 5th Semester • GPA: 3.43/4.0

STRENGTHS

End-to-end mobile app development with Flutter — from architecture to deployment-ready build

State management at scale using Provider and Riverpod across multiple production-grade projects

Local-first data architecture with Hive and Isar, including custom adapters and offline sync patterns

Algorithm implementation in practice — A* pathfinding, BSP generation, and procedural systems built from scratch

Full-stack feature delivery spanning Supabase Auth, Postgres, RLS, Edge Functions, REST APIs, live data sync, and deployment

Self-directed project builder with 8+ complete apps shipped independently
